Learning Journal for a SEMINAR

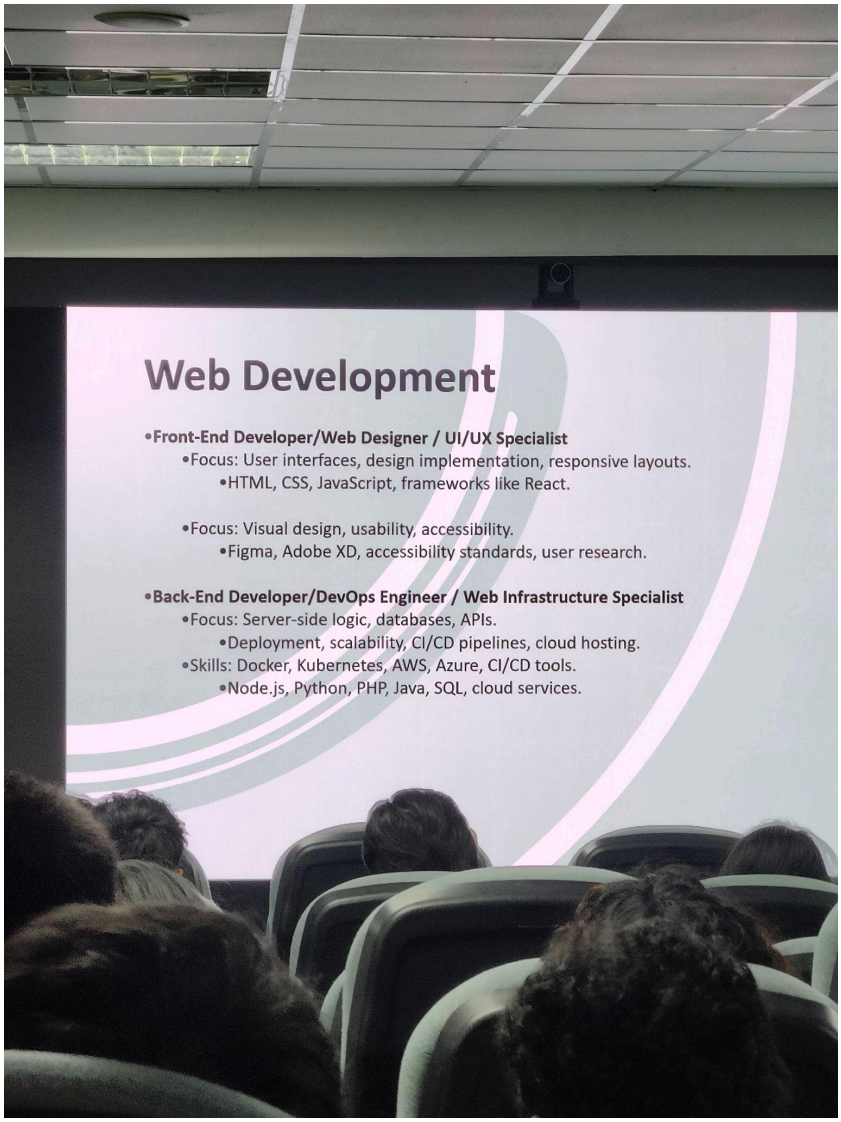

1. **Name of Company** **:Allianz PNB Life**
2. **Seminar Date** **:January 29, 2026**
3. **Seminar Title** **:DevRoutes**
4. **Seminar Objectives** **:How to navigate the IT industry using a personalized career roadmap**
5. **Speaker's Name** **:**Condeilamor Gantalao
6. **The Seminar** **:**

a.In the seminar, Mr. Batac explained why having a plan for your future job is so important. He talked about different areas in IT, like cybersecurity, making websites, and building mobile apps. He said that a career in IT isn't a straight line; it is more like a trip where you need to make your own map.

b.He told us to start by asking ourselves what we actually enjoy doing. From there, we should set small goals, like finishing a short class or building a small project. He also said we should be ready to change our plans if we need to. He used his own story as an example. He didn't study IT in college, but he started by fixing phones, moved to computer networks, then to security, and now he is a leader. His journey shows that if you have a plan, you can reach your goals even if you started in a different field.

c. The value of a career map: I learned that I need a long-term plan for my future. If I start by focusing on what I actually like, it will be much easier to stay motivated and keep going.
Your degree isn't a limit: I learned that you can work in IT even if your degree is in something else. Mr. Batac studied engineering but became successful in IT. This shows that your interest and your plan matter most.
IT jobs are always changing: I learned that tech jobs never stay the same. For example, someone who looks after servers today might move into a cloud job later. This means I have to keep learning new things as technology moves forward.

Pictures from the event may also be included.

7. Analysis and Reflection:

In addition, please answer the following questions about the seminar:

What? What? The most important thing I learned was how to make a personal career map.

So what? This helped me see that big goals aren't as scary if you break them down into small, simple steps.

Now what? I am going to start my own map by picking what I like most about IT. Then, I will set a small goal, like starting a simple project or a short course.

Prepared by:

Alfonso Rafael D. Barte

SWOT analysis

Strengths My main strength is that I now have a plan, or a "map," for my career. Because I am choosing a path that actually interests me, I will be more likely to work hard and stay excited. Also, by breaking my big goals into small steps, like finishing one short course, I can keep moving forward without feeling stuck.	**Weaknesses** One weakness is that I am still new and do not have much experience yet. I also need to make sure I don't focus too much on just one thing. If I only learn one skill, I might miss out on other important parts of IT that could help me later on.
Opportunities The best opportunity is that there are so many jobs available in IT, like in security or cloud systems. Since tech is always changing, I have the chance to move into new and better roles as I learn more. There are also many free or cheap ways to learn and build projects online to show what I can do.	**Threats** One threat is that technology changes very fast. A tool that is popular today might be replaced by something new tomorrow. There are also many other people trying to get IT jobs, so the competition is high. I need to keep learning and be ready to update my plan to stay ahead.

Learning Journal for a SEMINAR

1.	**Name of Company**	**: Cisco Networking Academy**
2.	**Seminar Date**	**: April 4, 2026**
3.	**Seminar Title**	**: Python essentials 1**
4.	**Seminar Objectives**	**: Learning about the essentials of python**
5.	**Speaker's Name**	**:**
6.	**The Seminar**	**:**

a. The Python Essentials 1 course provided a comprehensive introduction to Python programming, one of the most widely used languages in the tech industry today. The session walked through the foundational concepts of Python, including its syntax, data types, and basic programming logic. It also emphasized how Python serves as a versatile tool applicable across various fields such as web development, data analysis, and automation.

b. The seminar covered essential Python topics including variables, data types, operators, conditionals, loops, and functions. It explored how Python's straightforward syntax makes it beginner-friendly while still being powerful enough for complex tasks. The discussion also touched on practical applications of Python, demonstrating how even basic programming knowledge can be used to solve real-world problems efficiently.

c. Three Things I Learned from the Speaker

1. Python's simple and readable syntax makes it one of the most accessible programming languages for beginners, yet it remains powerful enough for professional use.
2. Understanding core concepts such as loops, conditionals, and functions is essential for writing efficient and logical Python programs.
3. Python has a wide range of real-world applications — from automating repetitive tasks to analyzing data — making it a highly valuable skill for any aspiring IT professional.

Analysis and Reflection:

What? The most impactful part of the seminar was discovering how Python's simplicity and versatility make it an incredibly powerful tool for solving practical problems. Learning that even foundational Python skills can be applied to real-world scenarios made the subject feel immediately relevant and exciting.

So What? This knowledge is directly useful to my development as an IT student. It gave me a clearer picture of how programming languages like Python form the backbone of modern technology, and it motivated me to take my coding skills more seriously as part of my professional growth.

Now What? Going forward, I plan to practice Python regularly by working on small projects and exercises to reinforce what I have learned. I also intend to progress to more advanced Python topics and explore how it can be applied in areas such as system development, data handling, and automation in my future IT work.

SWOT Analysis

Strengths

- The seminar effectively introduced Python programming in a clear and beginner-friendly manner, making complex concepts easier to digest.
- It provided practical insight into how Python is used in real-world applications such as automation, data handling, and system development.
- Attending the session strengthened my understanding of core programming logic and how it translates into writing functional Python code.
- The subject matter is directly relevant to my studies as an IT student with a focus on system development.

Weaknesses

- Some programming concepts introduced were quite advanced for beginners and required a stronger prior understanding of coding fundamentals.
- The limited hands-on coding practice during the session made it challenging to fully internalize and apply what was being taught.
- Certain Python features and functions discussed may require further self-study and practice to be fully understood and utilized effectively.

Opportunities

- The seminar serves as a solid foundation for pursuing more advanced Python courses or recognized programming certifications.
- The skills gained open doors to various career paths including software development, data analysis, and IT automation.

- I can apply Python programming in my academic projects to improve functionality and demonstrate practical coding skills.
- Python proficiency is highly sought after in the job market, meaning continued learning can greatly enhance my future career prospects.

Threats

- Programming languages and frameworks constantly evolve, making it necessary to continuously update and expand my knowledge.
- Without consistent practice, the Python concepts and syntax learned during the seminar may be difficult to retain over time.
- Limited access to development tools or a suitable coding environment may slow down my ability to practice and improve my Python skills.

Certificate:

Cisco Networking Academy
Python INSTITUTE

This certificate is awarded to

ALFONSO RAFAEL BARTE

for successfully completing

Python Essentials 1

offered by DICT-ITU DTC Initiative
through the Cisco Networking Academy program.

Learning Journal for a SEMINAR

1.	**Name of Company**	**: Cisco Networking Academy**
2.	**Seminar Date**	**: April 4, 2026**
3.	**Seminar Title**	**: Python essentials 2**
4.	**Seminar Objectives**	**: Learning about the essentials of python 2**
5.	**Speaker's Name**	**:**
6.	**The Seminar**	**:**

a. This seminar followed up on the first Python course. While the first one was about basic code, this session showed us how to manage bigger projects. We learned how to keep our work organized so it is easier to read and use again later.

b. We covered **modules and packages**, which help us group our code together. We also learned about **Object-Oriented Programming (OOP)**, which uses "Classes" as a blueprint for data. Finally, we looked at **Exception Handling**, which is a way to stop a program from crashing when an error happens.

c. Three Things I Learned from the Speaker

- **Organizing Code:** Using modules helps keep your scripts clean instead of having one long, messy file.
- **Classes and Objects:** These are tools that help you model real-world things in your code.
- **Handling Errors:** You can use special code to catch mistakes so your program keeps running smoothly.

Analysis and Reflection:

- **What?** The most interesting part was learning about **Classes**. It was cool to see how I can create a template for something and use it over and over in my program.
- **So What?** This is really helpful for me as an IT student. Knowing how to write clean code and handle errors is a big part of working with systems and servers.
- **Now What?** I plan to practice by rewriting some of my old homework using these new methods. I also want to see how I can use these skills in my other technical classes.

SWOT Analysis

Strengths

- The seminar was easy to follow and explained how professionals write code.
- I now know how to use **PIP** to add new features to my Python projects.
- Learning how to fix errors makes my programs much more reliable.

Weaknesses

- Some of the new ideas were a bit confusing at first and will take time to master.
- There wasn't enough time to practice every single topic during the session.
- I need to review my notes from Python 1 to fully understand some of these new parts.

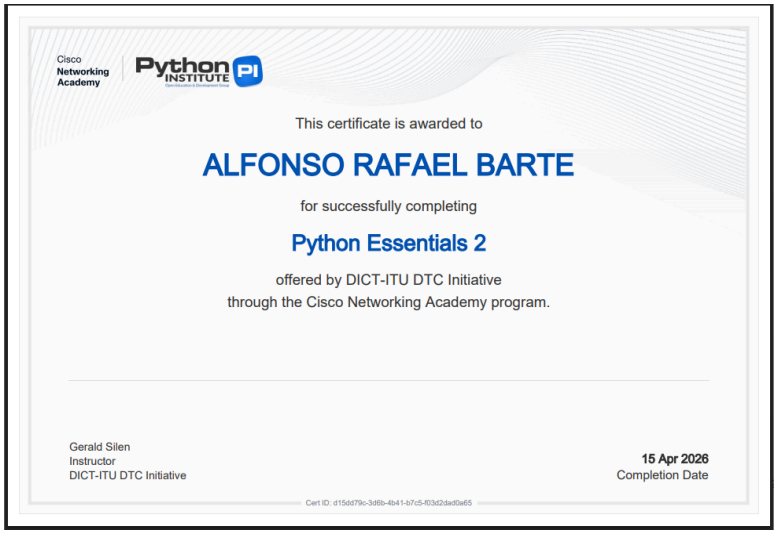

Opportunities

- These skills are great for my resume and future IT jobs.
- I can use what I learned to make my school projects work better.
- It helps me prepare for taking official Python certification exams.

Threats

- I might forget the new rules and syntax if I don't practice every week.
- Technology changes fast, so I need to keep up with new Python updates.
- Balancing this with my other hard subjects might make it tough to find practice time.

Learning Journal for a SEMINAR

1.	**Name of Company**	**:**
2.	**Seminar Date**	**: May 3, 2026**
3.	**Seminar Title**	**: SKILLS TO SUCCEED ACADEMY**
4.	**Seminar Objectives**	**: To equip students with future ready skills**
5.	**Speaker's Name**	**:**
6.	**The Seminar**	**:**

a. The Accenture Skills to Succeed (S2S) Academy is a comprehensive online learning platform designed to equip learners with the essential skills needed to thrive in today's evolving workforce. Through fifty-eight interactive learning modules organized across ten tracks, the program offered a holistic approach to professional development — covering career planning, jobseeking, problem solving, critical thinking, digital literacy, coding, and data interpretation. As an IT student, completing the program gave me a structured way to build both the technical and soft skills that employers increasingly look for in young professionals.

b.The S2S Academy is organized into ten major learning tracks that together provide a well-rounded foundation for employability and lifelong learning. The Choose a Career and Getting a Job tracks helped me reflect on my interests, identify my strengths, and learn proven techniques such as the CAR (Context, Action, Result) method for answering interview questions. The Success in Work and Lifelong Learning modules introduced concepts like thriving in virtual workplaces, developing a growth mindset, and mastering mistakes as part of personal growth. The Solving Problems and Thinking Critically tracks taught structured frameworks for analyzing situations, weighing pros and cons, evaluating evidence, and distinguishing real information from fake. On the technical side, Understanding Technology and Technology at Work covered foundational digital literacy along with current trends such as cloud computing, artificial intelligence, and blockchain. Finally, Exploring Coding and Discovering Data gave me hands-on exposure to programming languages like Python and JavaScript, app and game development, and data interpretation using tools such as Excel.

c. Three Things I Learned from the Program

1. Career success depends on more than technical knowledge — skills like critical thinking, a growth mindset, and clear communication are just as essential for long-term employability.

2. Structured frameworks such as the CAR technique, pros-and-cons analysis, and the five steps of critical thinking turn vague decisions into manageable, evidence-based choices.

3. Technology is evolving rapidly through AI, cloud computing, and blockchain, and staying current with these innovations is no longer optional for IT professionals — it is a baseline expectation.

Analysis and Reflection:

What? The most impactful realization from completing the S2S Academy was seeing how interconnected technical, problem-solving, and interpersonal skills truly are. Modules on critical thinking, growth mindset, and career exploration reframed how I view my development — not as a checklist of courses to finish, but as an ongoing process of becoming a well-rounded professional. Even seemingly simple scenarios, like Lila's Dilemma, made decision-making feel real and personal rather than abstract.

So What? This matters for me as an IT student because the technology industry now demands graduates who can code and communicate, who can build systems and think critically about how those systems are used. The S2S Academy showed me that so-called soft skills are not separate from technical work — they are what allow technical work to create real impact. It also reinforced the importance of staying adaptable in a field where tools, languages, and platforms change constantly.

Now What? Going forward, I plan to actively apply the frameworks I learned — the CAR technique, the five steps of critical thinking, and the principles of a growth mindset — in my academic projects, internships, and future job interviews. I also intend to continue exploring the more advanced technical areas the program introduced, particularly coding, data analysis, and emerging technologies like AI, so I can build genuine depth on top of the broad foundation S2S provided.

SWOT Analysis

Strengths

- • The S2S Academy provided a structured, end-to-end curriculum that addresses career planning, employability, and digital literacy in a single integrated program. • The

interactive format — videos, branching scenarios like Lila's Dilemma, and coding games — kept engagement high and made abstract concepts feel concrete and relatable. • Completing 58 modules across 10 tracks built my confidence in both soft and technical skill areas relevant to my IT studies. • The certificate from Accenture adds credibility to my résumé and demonstrates self-driven learning beyond the traditional classroom.

- It provided practical insight into how Python is used in real-world applications such as automation, data handling, and system development.
- Attending the session strengthened my understanding of core programming logic and how it translates into writing functional Python code.
- The subject matter is directly relevant to my studies as an IT student with a focus on system development.

Weaknesses

- The breadth of topics meant some modules covered concepts at a fairly introductory level, requiring additional self-study to gain real depth.
- Certain technical tracks — such as blockchain, cloud, and artificial intelligence — introduced complex ideas in short formats that cannot fully replace dedicated coursework.
- The self-paced nature of the program made it easy to move through modules quickly without fully internalizing the content.

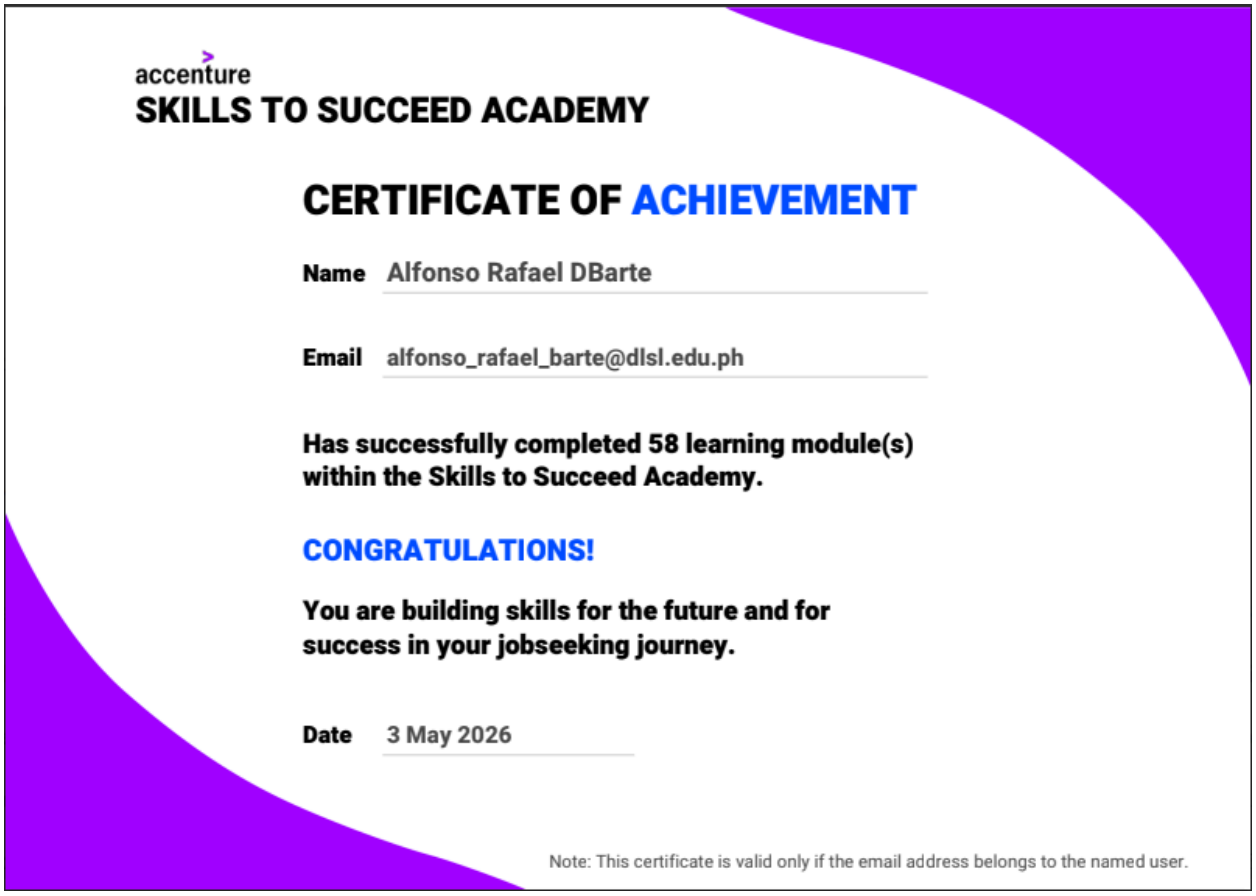

Opportunities

- The S2S certificate strengthens my employability profile and gives me concrete talking points for internship and job interviews.
- The career exploration modules helped me clarify my goals and consider career paths I had not previously thought about.
- Frameworks such as critical thinking and the CAR technique can be applied immediately in academic group projects, presentations, and interviews.
- Exposure to coding, data, and emerging technologies provides a launching pad for more specialized learning in fields like software development, data analytics, and AI.

Threats

- Without ongoing application, the soft skills and frameworks introduced — growth mindset, critical thinking steps, problem-solving methods — can fade if not consistently practiced.
- The fast-changing nature of technology means that some module content, especially around tools and platforms, may become outdated and require continuous updating.
- Relying on the certificate alone, without deepening the underlying skills through real practice, could limit how much value the program provides during actual job applications.

Certificate:

Completed modules:

Choose a Career

1. Lila's Dilemma
2. Career Pursuit
3. Why Do You Want To Be A...?
4. What Makes You Tick?
5. Find Your Future
6. Get Some Experience

Getting a Job

5. Identify Your Skills
10. Test Drive the CAR Technique

Success in Work

11. Thrive in the Virtual Workplace

Lifelong Learning

1. Intro to Growth Mindset
5. How to Master Mistakes

Solving Problems

2. Handling Problems Better
3. Solving Complex Problems
4. Pros and Cons
5. Good, Better, Best?
6. Creating a Hypothesis
8. Evaluating and Measuring

Thinking Critically

1. Intro to Critical Thinking
2. Four Cs for Future Success
3. Traits of a Critical Thinker
4. Skills for Critical Thinking
5. Is this Real or Fake?
7. Five Steps to Think Critically

Understanding Technology

4. Technology Then and Now
5. What's New on the Market
7. Changing Technology
8. Cloud
9. Artificial Intelligence
10. Blockchain

Technology at Work

2. Computer Basics
3. Internet Basics
5. Hardware and Software
6. Email Basics
9. How Search Engines Work
12. Deep Dive Into Tools

Exploring Coding

1. What is Coding?
2. JavaScript and Python
3. Common Coding Structures
4. Intro to Web Development
5. Types of Web Development
6. Intro to App Development
7. Becoming an App Developer
8. Comparing iOS and Android
9. Intro to Software Development
10. Game Development
11. How to Create a Video Game
12. Python Coding Game 1
13. Python Coding Game 2
14. JavaScript Coding Game 1
15. JavaScript Coding Game 2
16. Block-Based Coding Game

Discovering Data

1. Data Interpretation Simplified
2. It's All About Data!
3. Exploring Data
4. How to Collect Data
5. Five Scales of Measurement
6. Methods of Data Interpretation
7. Excel Basics
